HealthSource Clarity v1.4.2 Release Notes

This document describes the changes made in **HealthSource Clarity v1.4.2**:

Topic	See page
Change to Stat Request logging	4
Update to Epic EMR interface	5

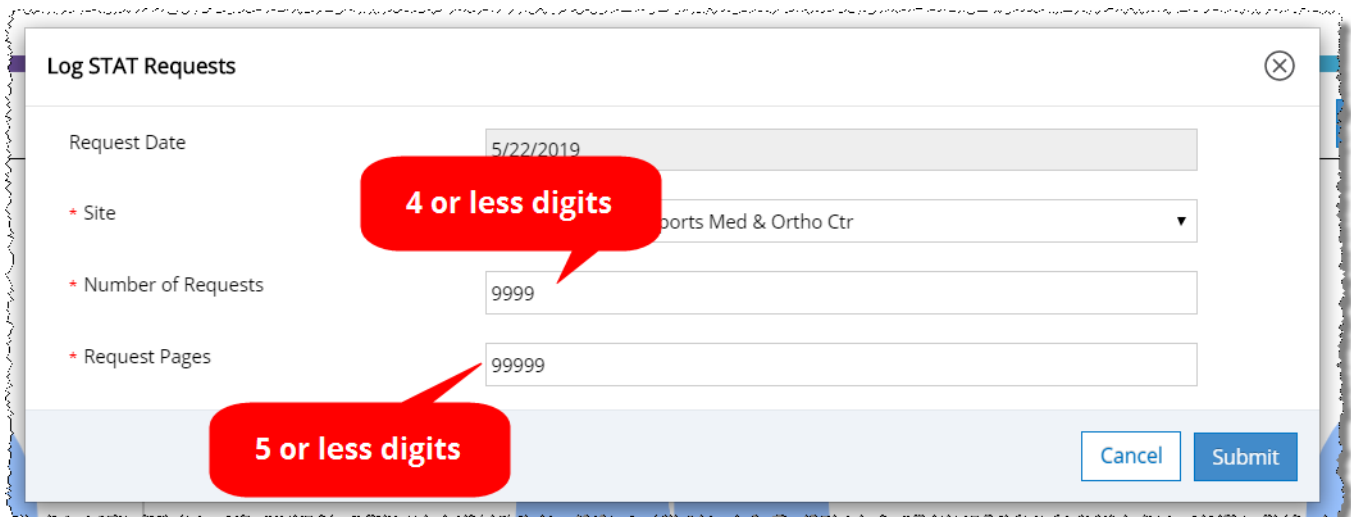

You **DON'T** need to install an updated **TrayApp** to use **v1.4.2**.

CHANGE TO STAT REQUEST LOGGING

We've placed two new limits on the data that can be entered on the **Log Stat Requests** screen:

Value	Allowed value	Maximum
Number of Requests	4 digits or fewer	9999
Request Pages	5 digits or fewer	99999

The screenshot shows the 'Log STAT Requests' form with the following fields and values:

- Request Date: 5/22/2019
- Site: Sports Med & Ortho Ctr
- Number of Requests: 9999
- Request Pages: 99999

Red callout boxes highlight the digit limits:

- A callout pointing to the 'Number of Requests' field says "4 or less digits".
- A callout pointing to the 'Request Pages' field says "5 or less digits".

Buttons for 'Cancel' and 'Submit' are visible at the bottom right of the form.

Only numeric characters can be entered in these fields.
No commas or other separators are allowed.

UPDATE TO EPIC EMR INTERFACE

This change applies only to sites that use both:

- the Epic EMR system to store patient information;
- **HealthSource Clarity** for Release of Information services.

Epic now requires that each incoming request from **HealthSource Clarity** includes a **Client_ID** value in the header. We have modified the interface between the two applications to provide this **Client_ID** value.

No action required at sites

Managers and Client Service Representatives at these sites do **NOT** need to do anything differently due to this modification.

The request data will automatically include the **Client_ID** value after the **v1.4.2** release.

See the individual dashboard *Job Aids* for detailed information.
